

HYD Series Hydraulic Conversion Modules

Need a convenient and flexible solution to upgrading your hydraulic satellite field controllers to the power and reliability of modern-day electronics while retaining your hydraulic sprinklers? Hunter has the answer with the new HYD Series hydraulic conversion modules.

Available in 10- and 12-station configurations, these units feature individual station on-off-auto selection, solenoids with serviceable and captive plungers and an integrated dual filter system. Select the base module for mounting as you choose or match

the HYD up with one of the two enclosures: the MPC wall and controller side-mount enclosure for a single HYD, or the PEDP1 pedestal enclosure that can accommodate up to three HYD units. Another innovative solution from Hunter!

FEATURES & BENEFITS

10- or 12-station versions

Combine modules to easily match controller stations counts

One, two and three module enclosure configurations

Total flexibility to meet every course requirement

Each station includes On-Off-Auto selection

Flexible control for manual operation or station bypass

Integrated supply-line and individual station filtration

Dual protection from contamination and inconsistent activation

PRODUCT EXPLANATION

EXAMPLE: **HYD-12**

MODEL
HYD = Hydraulic Module

STATIONS
10 = Ten station version
12 = Twelve station version
