

**6000 SERIES  
DISTRIBUTING VALVE****PUMP APPLICATION**

The 6000 Series line of distributing valves offers exceptional reliability and durability even under the dirtiest water conditions. With a metal die-cast body, the 6000 series valves are capable of high pressure applications and are recommended to be used on pump fed systems or high-flow city water systems. The 6000 series is also ideal for onsite wastewater and effluent water applications.

The 6000 valve is available in 4 or 6 outlet models that are cammed for 2 to 6 zone operation. With only one moving part (the stem and disk assembly), the valve is easily serviced and maintained.

The valve requires 15 GPM to operate and works at pressures from 25 to 150 PSI.
